

Feedback Exercise

Will Stout, Xuyang Li

October 2020

1 Feedback Received

- From Tajen Freeman:
 1. Sizes of pie charts vs size of the map
 - We will pick a diverse city set to make sure the pie charts are displayed nicely on the map.
 2. Compare two cities that are not geographically close
 - We plan to add some storytelling when two cities are selected to compare as an optional feature.
 3. Pie chart update when tax toggled
 - Pie chart will be updated and resized when tax is toggled.
 4. Interactivity aspect of the bubbles on the left
 - The bubble chart will be synchronized with the map. When a bubble is clicked or highlighted, the corresponding pie chart on the map will be highlighted as well, and vice versa.
 5. Show the exact numbers in raw data
 - The exact numbers will be shown in a tooltip when a pie chart is selected on the map.
 6. Incorporate leasing and/or buying prices with rent
 - This might be hard to implement because leasing/buying prices are drastically different from rent prices.
 7. option for users to specify salary range
 - We plan to add a drop down for salary intervals as an option feature.
- From Todd Derrick:
 1. City choices
 - Cities will be chosen based on population.
 2. Show top 3 best instead of top 1
 - We will show top 3 when the highlight best button is clicked.

3. Make clear that the numbers shown are estimated
→ We will make sure this is clear by adding some explanations on the web page.
- From Hong Yang:
 1. Job type choices
→ Jobs are chosen based on the number of data points available on Payscale.com.

2 Quality of the Feedback

The feedback quality is great. We received some very helpful comments that made us more clear about how we should implement certain details. We also received suggestions that inspired us to think about possible features that were not included in our initial proposal.
